

Single arm electric anesthesia pendant(NEW)

HFP-SD90 160(NEW)

The single arm electric surgical tower is an indispensable medical auxiliary equipment in modern clean operating room. With high bearing capacity, it can easily lift and hang the anesthesia machine, empty the ground, and rotate with high-strength cantilever degree of 340; the mechanical brake can prevent floating, and the performance is stable and reliable, and the medical staff can gently move and lock the position of the tower body according to the needs. According to your requirements, oxygen, suction, nitrous oxide, air and other medical gas terminals and waste discharge terminals can be selected according to your requirements. At the same time, it can also reasonably select strong, weak current and network, communication paging, video and other sockets; the comprehensive service makes your work more convenient and easy.
